1. Key Insights

- **Top Performing Cuisine:** The **Asian** category is the primary driver of volume and value, leading in both total orders (1,059) and total revenue (approx. ₹20k).
- **Peak Demand Windows:** Sales exhibit a clear "dual-peak" pattern during the day, with the highest order volumes occurring around **12:00 PM (Lunch)** and **6:00 PM - 7:00 PM (Dinner)**.
- **High-Value Menu Items:** The **Korean Beef Bowl** is the standout product, generating significantly higher revenue (₹4.4k) compared to other items, despite a similar order count to the Tofu Pad Thai.

2. Recommendations

- **Operational Staffing:** Shift staffing levels to peak between **11:30 AM – 1:30 PM** and **5:30 PM – 8:00 PM** to handle the identified surge in order volume and reduce wait times.
- **Targeted Promotions:** Launch a "Mid-Afternoon Special" between **3:00 PM and 5:00 PM** (the lowest dip in the trend chart) to incentivize orders during off-peak hours and balance kitchen utilization.

3. Limitation / Assumption

- **Assumption:** It is assumed that the "Total Revenue" figures are inclusive of all taxes and discounts, and that the "order_time" recorded reflects when the order was placed, not when it was fulfilled.
